

OHP transmission / print scale check

Print with exactly the same film, printer, ink and driver settings as the masters.

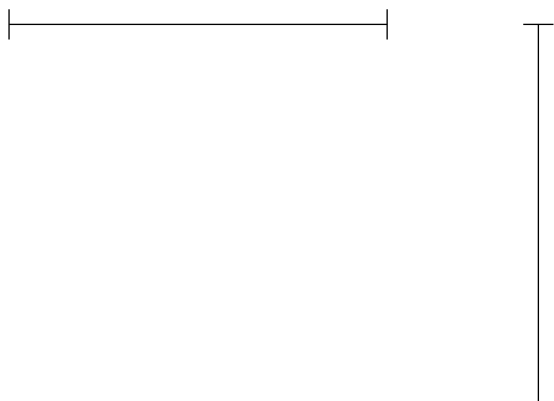

Print at 100%; disable fit-to-page. Gray code is not calibrated transmission.

0 = maximum black ink; 255 = clear film. Inspect under the projector light.

Film density, projector brightness and viewing adaptation require a trial.

50.00 mm horizontal and vertical references (measure after printing)
